

Mental Health Association in New York State, Inc.

Youth Mental Health Fact Sheet

According to the World Health Organization, mental health is defined as a state of wellbeing in which every individual realizes his or her own potential, can cope with normal stresses of life, can work productively and fruitfully, and is able to make a contribution to his or her community.

Fast Facts

Half of all chronic mental illnesses begin by age 14

Half of all lifetime cases of anxiety disorders begin as early as age 8

22% of youth experience serious mental illness in a given year

Youth substance abuse may be an attempt to self-medicate symptoms of undiagnosed mental illness

Early signs of mental illness are often mistaken for typical characteristics of childhood and adolescent development

The median delay between the onset of symptoms and treatment is 10 years.

Mental Health Association in New York State, Inc. (MHANYS) is a non-profit organization with 26 local affiliates serving fifty counties across the state, and is an affiliate of Mental Health America (MHA). Through public education, training, advocacy, and family engagement, we are on the forefront of the fight to improve lives of individuals and families by raising mental health awareness.

HEALTHY MINDS FOR A HEALTHY NEW YORK

What are the **effects** of untreated mental illness?

- Over **60%** of young adults with mental illness were unable to complete high school
- **4 times** less likely to go to college/trade school, or obtain employment
- **3 times** more likely to be involved in criminal justice activities
- **1 in 12** high school students have attempted suicide

Know When to Ask for **HELP**

Signs & Symptoms

- Loss of enjoyment and interest in activities
- Lack of energy, feeling fatigue, or unexplained aches and pains
- Difficulty concentrating or making decisions
- Changes in appetite, sleep, and/or mood
- Strained or withdrawn relationships
- Feeling of worthlessness, anger, and/or guilt
- Thoughts of death or suicide

Risk Factors

- Family or personal history of mental health disorders
- Trauma or difficulties during childhood
- Significant life change or loss; ongoing stress and anxiety
- Medical condition, hormonal changes, and/or chronic pain
- Use or withdrawal of alcohol or drugs, including prescription medications
- Lack of social supports and coping strategies

There is **HOPE** for Recovery

Recovery is a self-defined process of change through which an individual improves health and wellness, lives a self-directed life, and strives to reach full potential. It's important to remember that recovery is possible.

60 to 90% of people who receive treatment experience positive outcomes.

Protective factors to consider when addressing mental health concerns - social supports, healthy lifestyle choices, avoiding drugs and alcohol, positive coping skills, good problem solving skills, and early intervention.
