If a word or a phrase can be formed by changing the order of the letters of another word, it's referred to as an anagram.

Some examples of anagram words

car = arc

listen = silent

elbow = below

triangle = integral

night = thing

....and there are phrases:

conversation = voice rants on

bad credit = debit card

coins kept = in pockets

Write a program to check whether two given strings are an anagram of each other or not.

An anagram of a string is another string that contains the same characters, only the order of those characters is different.  "wxyz" and "yxwz" are anagrams.

For the purposes of this project, you will consider only one-word anagrams.
