

Math Problem of the Week #13

Due Friday, February 4th, 2011

Hello Animal Explorers,

Did you know there are real dragons? The Komodo dragon may not breathe fire or fly, but this lizard can grow to 9 feet 8 inches long!

1. Komodo dragons live on several islands in Indonesia. There are about 100 on Gili Motang island, 100 on Gili Dasami island, 1,300 on Rinca island, 1,700 on Komodo island, and 2,000 on Flores island. **Using these numbers figure out how many Komodo dragons are there in the wild?**

_____ **Komodo dragons** 🐾 🐾 🐾

2. A Komodo dragon's tail is the same size as it's body. If a Komodo dragon measured 8 feet from it's snout to the tip of it's tail, **how long is it's body without the tail?**

_____ feet long. 🐾 🐾

Safari Lottery #13

Circle either the legendary Chinese dragon or the real Komodo dragon.

Whichever is picked the least will earn 🐾 🐾 .
