

September 2023

Dear Student,

Congratulations for being accepted into the Math Honors Program! The reason for your acceptance is that you have met the requirements needed to successfully complete this course.

Please remember that the math honors program is rigorous and demanding. Students are expected to meet and maintain high standards of performance in honors courses. The program is comprehensive in scope and sequence, and accelerated in pace of instruction. Placement in honors is subject to re-evaluation on an ongoing basis and students may be reassigned to regents-level classes at any time during the year.

Certain standards must be maintained in order to remain in honors math:

- An average of 85% must be maintained in this course.
- Classwork, homework, projects, etc. must be of high quality and consistently submitted on time.
- Proper behavior must be practiced to ensure learning and maintain safety within the classroom environment.

Hard work, self-discipline, and academic interest have gotten you here; maintaining these attributes will not only keep you here, but will guarantee you an enriching and successful experience in math honors.

Congratulations!

Sincerely,

*Mrs. Marinaccio*
